

Assignment -

This assignment demonstrates the implementation of a Convolutional Neural Network (CNN) for image recognition using the CIFAR-10 dataset. The model architecture follows the specified requirements of 3 convolutional layers, 3 ReLU activations, and 2 pooling layers.

The code below used the data set [CIFAR-10 Dataset](#)

Please identify a dataset you want to use for image recognition.
Create a CNN model to perform image recognition for your dataset.

Use 3 Conv layers, 3 ReLU activations and 2 Pooling layers in your model.
